The type of seat your child needs depends on several things including age, size, and type of vehicle. The chart below is a guide to begin your search. More detailed information about car seat safety can be found at www.aap.org/family/carseatguide.htm

Types of car safety seats at a glance.

Age	Type of Seat	General Guideline
Infants	Infant-only and rear facing convertible	All infants should always ride rear-facing until they are 1 year of age and weigh at least 20 lbs.
Toddlers & Preschoolers	Convertible, Combination and forward-facing	Children 1 year of age and at least 20 pounds can ride forward-facing. It is best to ride rear-facing as long as possible
School-aged children	Booster	Booster seats are for older children who have outgrown their forward-facing car safety seats. Children should stay in a booster seat until the adult seat belts fit correctly (usually when a child reaches about 4'9" in height and is between 8 and 12 years of age.)
Older children	Seat Belts	Children who have outgrown their booster seats should ride in lap and shoulder belt; they should ride in the backseat until 13.
